

Dear Customers,

*It is a pleasure to introduce you to “**Flowering Meadow Nursery, Inc.**”. Founded in 1987, Flowering Meadow Nursery operates on 120 breathtaking acres of unspoiled Adirondack landscape nestled in the “GLEN” of Jay, NY.*

A brief history ...

We began as a landscape company specializing in naturalization. Our focus was, and still is, to utilize native hardy northern grown nursery stock.

During the 90's as our business and need for native plant material grew, it became increasingly difficult to find quality plant material. Hence, we expanded into the growing side of the “Green Industry”. We now take great pride in offering our customers quality hardy grown nursery material. Growing our material in the extreme elements that we face in the North Country ensures its hardiness and survival rate.

In our fields, we grow many varieties and sizes of shade trees, evergreens, flowering shrubs, and perennials. In our container area, we maintain hundreds of deciduous shrubs, evergreens, selected container trees, perennials, berries and new this season herbs and jeepers creepers.

In an ongoing effort to continually improve our products and services, we employ many talented people who take great pride in their work. Our nursery manager - Chad Lopez, and retail sales- Mairead Haley are always on hand to help assist in your gardening needs. While in our landscape division, foreman - Ian Smart assisted by many experienced hardworking team players has the experience and knowledge to implement your landscape project from beginning to end.

If you haven't yet visited the nursery, owners Michael and Patti welcome and encourage you to stroll through our meadows and growing fields...listening to the birds... browsing through our container area...or just relaxing in the beauty of the surrounding mountain views.

Be well,

Michael T. Harrison ~ Patti A. Harrison

Vaccinium - Blueberry

Blueberries require an acid soil with the pH in the range of 4.5 to 5.5 for best results. Because of their shallow, fibrous root system, blueberries require a soil that is uniformly moist, but not saturated. Full sun to part shade, fertilize sparingly in spring with acidic fertilizer.
